Level 1

You may now pursue to the level 1 of the project.

* Board
  The game is played on a series of dungeon levels which are simple square grids. The grid cells may be empty, walls, or floor. Empty cells must never be next to floor cells. Maps can be loaded from and save to a file.

*** Graphics
  The graphics can either be 2D or text based. There is a window where the board is displayed.

* Controls
  The player is controlled with zqsd and can move through floor cells, but should be blocked by walls.

* Monsters
  Monsters appear on the map, and move along some predefined path.

** Fighting
  The hero can attack monsters, and kill them.

* Experience
  The hero can progress and level up doing more and more damages the more monsters he kills.

** Intelligent Monsters
  Monsters will go towards the hero, without getting stuck. In simple situations without other moving entities, an optimal path is used.

Dungeon Battle
A rogue-like game

4 people

Project Description

Dungeon crawls, or more specifically rogue-likes are turn-based computer games in which a single player evolves through a procedurally generated dungeon, fighting creatures, finding various objects, acquiring experience. The final objective may be to reach the top (or bottom, if the dungeon is a cave) of the dungeon and come back, or to find a special object. Death is typically permanent, and plays can be very short, especially for beginners.

Level 1

You may now pursue to the level 1 of the project.

** Window
A character, a background, and objects can be rendered.

** Objects
Objects are generated in semi random fashion, and are falling vertically to the ground.

** Character physics
The character can move left or right, jump and crouch. Details (e.g. double-jump) are up to game designers but must be documented and tested. The player cannot move through walls and floors.

* Death
When hit, the character dies.

* Score
There is a score system, with high score and leaderboard.

** Gameplay
The more the player progresses, the harder the game gets. This implies having the objects falling in a smart way which can support the acceleration. There should always be a winning strategy

** Animations
The character is animated, with several images for each action.

Dodge man
A one screen game

3 people

Project Description

The player is stuck inside the window, and objects are falling from the sky. If the player is touched, he dies, and if a dodges an object, the object disappears after touching the ground. The longest the player stays alive, the highest the score, but the hardest it gets.

Level 1

You may now pursue to the level 1 of the project.

** GUI
A user interface allows to create a new drawing of specified size, select the drawing tool, and display the drawing.

* Basic tools
It should be possible to perform freehand drawing, and draw basic shapes such as squares, circles, etc.

* Parameters
When drawing shapes or lines, different options are available, such as thickness, color, filling,...

* Save
The drawing can be saved and loaded.

* Previsualization
In the GUI, tools assist the creation of shapes with a live pre-visualization.

** History
A drawing is equipped with a history of modifications. Undo/redo operations are available.

*** Team Effort
In the spirit of etherpad, a server hosts each drawing, and several people can edit at the same time a drawing. The server must not make any rendering. Modifications in the history are tagged with their author.

Paint is not dead

Collaborative drawing

4 people

Project Description

This software enables the user to draw pictures on its computer. It can be freehand drawing, but the drawing may also be guided by the computer in order to draw specific shapes (circles, squares...). It can contain more advanced features, with for example edge detections and automatic color filling.

Click and Run
A canabalt-like game

3 people

Project Description
In this game, a player-controlled character is constantly running through a world, always in the same direction. The only control that the player has is to make the character jump to avoid various sorts of threats. The objective is to run for as long as possible. The world is generated procedurally and on the fly.

Level 1

You may now pursue to the level 1 of the project.

⋆⋆ Basic features
Functions to create a new database; create payers; add a transaction; extract past transactions within a given time range.

⋆ Balance
It should be possible to compute the current balances.

⋆⋆ Resolution
The tool should propose solutions to balance the account: optimizing either the total number of transactions, or the maximum number of transaction per user.

⋆ CSV report
Produce a CSV report containing all the transactions and the transaction induced by the resolution.

⋆ Import
It should be possible, within the application, to import a past state of the application. There should be a meaningful notion of equality between saved states.

⋆⋆ Web interface
All features (above and below) should be usable through a web interface. The web service should require to log in.

⋆⋆ Groups
Within a single instance of the application it should be possible to create groups of users hosting group-specific transactions. Each user of a group may have specific permissions: addition/deletion/modification/visualization of transaction items.
