## Conclusion

# Signal-Event (Timed) Words

Asarin - Caspi - Maler 2002

- ▶  $\Sigma_e$  finite set of (instantaneous) events
- ▶  $\Sigma_s$  finite set of signals
- ▶  $\mathbb{T}$  time domain,  $\overline{\mathbb{T}} = \mathbb{T} \cup \{\infty\}$
- ▶  $\Sigma = \Sigma_e \cup (\Sigma_s \times \mathbb{T})$
- ▶ Notation:  $a^d$  for  $(a, d) \in \Sigma_s \times \overline{\mathbb{T}}$
- ▶  $\Sigma^\infty$  set of **signal-event (timed) words**  
Example:  $a^3 f f g b^{1.5} a^2 f$
- ▶ Signal stuttering:  $a^2 a^3 \approx a^5$ ,  $a^\infty = a^2 a^2 a^2 \dots$

# Signal-Event (Timed) Words

Asarin - Caspi - Maler 2002

- ▶  $\Sigma_e$  finite set of (instantaneous) events
- ▶  $\Sigma_s$  finite set of signals
- ▶  $\mathbb{T}$  time domain,  $\overline{\mathbb{T}} = \mathbb{T} \cup \{\infty\}$
- ▶  $\Sigma = \Sigma_e \cup (\Sigma_s \times \mathbb{T})$
- ▶ Notation:  $a^d$  for  $(a, d) \in \Sigma_s \times \overline{\mathbb{T}}$
- ▶  $\Sigma^\infty$  set of **signal-event (timed) words**  
Example:  $a^3 f f g b^{1.5} a^2 f$
- ▶ Signal stuttering:  $a^2 a^3 \approx a^5$ ,  $a^\infty = a^2 a^2 a^2 \dots$

Example:  $a^3 f f g b^{1.5} a^2 f$
- ▶ Signal stuttering:  $a^2 a^3 \approx a^5$ ,  $a^\infty = a^2 a^2 a^2 \dots$

# Signal-Event (Timed) Words

## Unobservable signal $\tau$

- ▶ Useful to hide signals:

Signal-event word  $\xrightarrow{\text{hiding signals}}$  Classical timed words

$$a^3fb^1gfa^2f$$

$$\tau^3f\tau^1gf\tau^2f = (f, 3)(g, 4)(f, 4)(f, 6)$$

- ▶  $\tau^0 \approx \varepsilon$  : an hidden signal with zero duration is not observable.  
 $a^0 \not\approx \varepsilon$  : a signal, even of zero duration, is observable.  
 $\tau^2 \not\approx \varepsilon$  : we still observe a time delay but the actual signal has been hidden.  
Example :  $a^2\tau^0a^1f\tau^0g\tau^1fb^2b^2b^2 \dots \approx a^3fg\tau^1fb^\infty$
- ▶ Signal-event words  $SE(\Sigma) = \Sigma^\infty / \approx$

# Signal-Event (Timed) Words

## Unobservable signal $\tau$

- ▶ Useful to hide signals:

Signal-event word  $\xrightarrow{\text{hiding signals}}$  Classical timed words

$$a^3fb^1gfa^2f$$

$$\tau^3f\tau^1gf\tau^2f = (f, 3)(g, 4)(f, 4)(f, 6)$$

- ▶  $\tau^0 \approx \varepsilon$  : an hidden signal with zero duration is not observable.  
 $a^0 \not\approx \varepsilon$  : a signal, even of zero duration, is observable.  
 $\tau^2 \not\approx \varepsilon$  : we still observe a time delay but the actual signal has been hidden.  
Example :  $a^2\tau^0a^1f\tau^0g\tau^1fb^2b^2b^2 \dots \approx a^3fg\tau^1fb^\infty$
- ▶ Signal-event words  $SE(\Sigma) = \Sigma^\infty / \approx$

# Signal-Event (Timed) Words

## Unobservable signal $\tau$

- ▶ Useful to hide signals:

Signal-event word  $\xrightarrow{\text{hiding signals}}$  Classical timed words

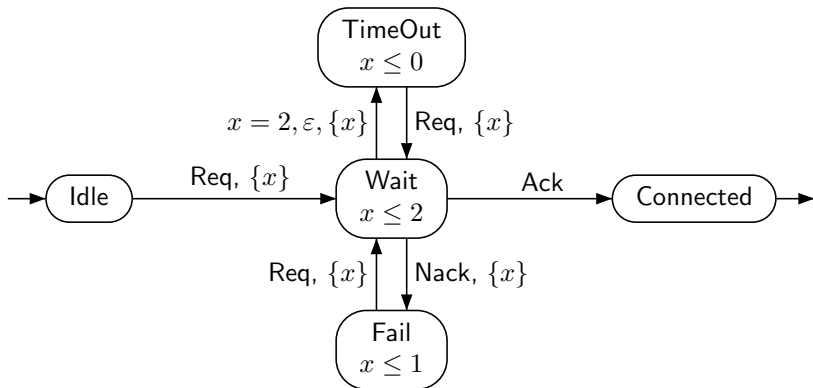

$$a^3fb^1gfa^2f$$

$$\tau^3f\tau^1gf\tau^2f = (f, 3)(g, 4)(f, 4)(f, 6)$$

- ▶  $\tau^0 \approx \varepsilon$  : an hidden signal with zero duration is not observable.  
 $a^0 \not\approx \varepsilon$  : a signal, even of zero duration, is observable.  
 $\tau^2 \not\approx \varepsilon$  : we still observe a time delay but the actual signal has been hidden.  
Example :  $a^2\tau^0a^1f\tau^0g\tau^1fb^2b^2b^2 \dots \approx a^3fg\tau^1fb^\infty$
- ▶ Signal-event words  $SE(\Sigma) = \Sigma^\infty / \approx$

# Signal-Event (Timed) automata

- ▶ States emit signals
- ▶ Transitions emit (instantaneous) events

- ▶ Run :  $\text{Idle}^3 \cdot \text{Req} \cdot \text{Wait}^2 \cdot \text{TimeOut}^0 \cdot \text{Req} \cdot \text{Wait}^1 \cdot \text{Ack} \cdot \text{Connected}^8$
- ▶  $SEL$  : languages accepted by  $SE$ -automata without  $\varepsilon$ -transitions.
- ▶  $SEL_\varepsilon$  : languages accepted by  $SE$ -automata with  $\varepsilon$ -transitions.

# Outline

Introduction

Signal-Event (Timed) Words and Automata

3 Signal-Event (Timed) Substitutions

Recognizable substitutions

Conclusion

# Signal-Event (Timed) Substitutions

## Definition

- ▶ Abstract alphabet :  $\Sigma_e$  and  $\Sigma_s$
- ▶ Concrete alphabet :  $\Sigma'_e$  and  $\Sigma'_s$
- ▶ Substitution  $\sigma$  from  $SE(\Sigma)$  to  $SE(\Sigma')$  defined by:

$$a \in \Sigma_e : L_a \subseteq (\Sigma'_e \cup \Sigma'_s \times \{0\})^*$$

$$\sigma(a) = L_a$$

$a \in \Sigma_s \setminus \{\tau\} : L_a \subseteq SE(\Sigma')$  **not containing Zeno words.**

$$\sigma(a^d) = \{w \in L_a \mid \|w\| = d\}$$

$$a = \tau : L_\tau = \{\tau\} \times \overline{\mathbb{T}}$$

$$\sigma(\tau^d) = \{\tau^d\}$$

## Remark

If we allow Zeno words in  $L_a$  then we may get transfinite words as refinements.  
Example: if  $b^1 f b^{1/2} f b^{1/4} f \dots \in L_a$  and  $L_g = \{g\}$  then  $\sigma(a^2 g)$  is transfinite.

# Signal-Event (Timed) Substitutions

## Definition

- ▶ Abstract alphabet :  $\Sigma_e$  and  $\Sigma_s$
- ▶ Concrete alphabet :  $\Sigma'_e$  and  $\Sigma'_s$
- ▶ Substitution  $\sigma$  from  $SE(\Sigma)$  to  $SE(\Sigma')$  defined by:

$$a \in \Sigma_e : L_a \subseteq (\Sigma'_e \cup \Sigma'_s \times \{0\})^*$$

$$\sigma(a) = L_a$$

$a \in \Sigma_s \setminus \{\tau\} : L_a \subseteq SE(\Sigma')$  **not containing Zeno words.**

$$\sigma(a^d) = \{w \in L_a \mid \|w\| = d\}$$

$$a = \tau : L_\tau = \{\tau\} \times \overline{\mathbb{T}}$$

$$\sigma(\tau^d) = \{\tau^d\}$$

## Remark

If we allow Zeno words in  $L_a$  then we may get transfinite words as refinements.  
Example: if  $b^1 f b^{1/2} f b^{1/4} f \dots \in L_a$  and  $L_g = \{g\}$  then  $\sigma(a^2 g)$  is transfinite.

# Signal-Event (Timed) Substitutions

## Remark

In general, SE-substitutions are not morphisms

Example: if  $L_a = \{b^2\}$  then  $\sigma(a^1) = \emptyset$  and  $\sigma(a^2) \neq \sigma(a^1)\sigma(a^1)$

Substitutions are applied to SE-words in **normal form**:

$$\sigma(a^2\tau^0a^1f\tau^0g\tau^1fb^2b^2b^2\cdots) = \sigma(a^3)\sigma(f)\sigma(g)\tau^1\sigma(f)\sigma(b^\infty)$$

## Proposition

Let  $\sigma$  be a timed substitution, given by a family  $(L_a)_{a \in \Sigma_e \cup \Sigma_s}$ .

Then,  $\sigma$  is a morphism if and only if for each signal  $a \in \Sigma_s$  we have

1.  $L_a$  is closed under concatenation:  
for all  $u, v \in L_a$  with  $\|u\| < \infty$ , we have  $uv \in L_a$ ,
2.  $L_a$  is closed under decomposition:  
for each  $v \in L_a$  with  $\|v\| = d$ , for all  $d_1 \in \mathbb{T}$ ,  $d_2 \in \overline{\mathbb{T}}$  such that  $d = d_1 + d_2$ , there exist  $v_i \in L_a$  with  $\|v_i\| = d_i$  such that  $v = v_1v_2$ .

# Signal-Event (Timed) Substitutions

## Remark

In general, SE-substitutions are not morphisms

Example: if  $L_a = \{b^2\}$  then  $\sigma(a^1) = \emptyset$  and  $\sigma(a^2) \neq \sigma(a^1)\sigma(a^1)$

Substitutions are applied to SE-words in **normal form**:

$$\sigma(a^2\tau^0a^1f\tau^0g\tau^1fb^2b^2b^2\cdots) = \sigma(a^3)\sigma(f)\sigma(g)\tau^1\sigma(f)\sigma(b^\infty)$$

## Proposition

Let  $\sigma$  be a timed substitution, given by a family  $(L_a)_{a \in \Sigma_e \cup \Sigma_s}$ .

Then,  $\sigma$  is a morphism if and only if for each signal  $a \in \Sigma_s$  we have

1.  $L_a$  is closed under concatenation:  
for all  $u, v \in L_a$  with  $\|u\| < \infty$ , we have  $uv \in L_a$ ,
2.  $L_a$  is closed under decomposition:  
for each  $v \in L_a$  with  $\|v\| = d$ , for all  $d_1 \in \mathbb{T}$ ,  $d_2 \in \overline{\mathbb{T}}$  such that  $d = d_1 + d_2$ ,  
there exist  $v_i \in L_a$  with  $\|v_i\| = d_i$  such that  $v = v_1v_2$ .

# Outline

Introduction

Signal-Event (Timed) Words and Automata

Signal-Event (Timed) Substitutions

4 Recognizable substitutions

Conclusion

# Recognizable substitutions

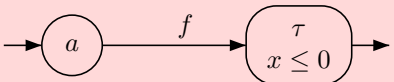

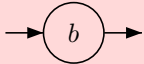

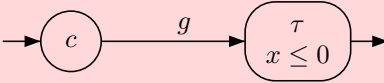

## Definition

Let  $\sigma$  be a substitution defined by  $(L_a)_{a \in \Sigma_e \cup \Sigma_s}$ . Then,

- ▶  $\sigma$  is a *SEL*-substitution if each  $L_a$  is in *SEL*
- ▶  $\sigma$  is a *SEL<sub>ε</sub>*-substitution if each  $L_a$  is in *SEL<sub>ε</sub>*

# Closure under *SEL*-substitutions

*SEL* is not closed under *SEL*-substitutions

- ▶  $L = \{a^0 f\}$  is recognized by 
- ▶  $L_a = \{b\} \times \overline{\mathbb{T}}$  is recognized by 
- ▶  $L_f = \{c^0 g\}$  is recognized by 
- ▶  $\sigma(L) = \{b^0 c^0 g\}$  cannot be accepted without  $\varepsilon$ -transitions.

## Theorem

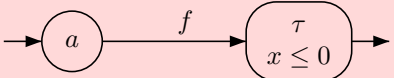

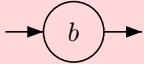

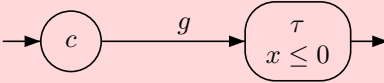

The class *SEL* is closed under *SEL*-substitutions satisfying for each  $f \in \Sigma_e$

$$L_f \subseteq \Sigma'_e((\Sigma'_s \times \{0\})\Sigma'_e)^*$$

i.e., each word in  $L_f$  must start and end with an instantaneous event.

# Closure under *SEL*-substitutions

*SEL* is not closed under *SEL*-substitutions

- ▶  $L = \{a^0 f\}$  is recognized by 
- ▶  $L_a = \{b\} \times \overline{\mathbb{T}}$  is recognized by 
- ▶  $L_f = \{c^0 g\}$  is recognized by 
- ▶  $\sigma(L) = \{b^0 c^0 g\}$  cannot be accepted without  $\varepsilon$ -transitions.

## Theorem

The class *SEL* is closed under *SEL*-substitutions satisfying for each  $f \in \Sigma_e$

$$L_f \subseteq \Sigma'_e((\Sigma'_s \times \{0\})\Sigma'_e)^*$$

i.e., each word in  $L_f$  must start and end with an instantaneous event.

# Closure under $SEL$ -substitutions

## Theorem

The class  $SEL$  is closed under  $SEL$ -substitutions satisfying for each  $f \in \Sigma_e$

$$L_f \subseteq \Sigma'_e((\Sigma'_s \times \{0\})\Sigma'_e)^*$$

i.e., each word in  $L_f$  must start and end with an instantaneous event.

Handling **events** is easy for  $SEL$ -substitutions.

# Closure under $SEL$ -substitutions

## Theorem

$$L_f \subseteq \Sigma'_e((\Sigma'_s \times \{0\})\Sigma'_e)^*$$

i.e., each word in  $L_f$  must start and end with an instantaneous event.

Handling **signals** is easy for *SEL*-substitutions.

# Closure under *SEL*-substitutions

## Theorem

The class *SEL* is closed under *SEL*-substitutions satisfying for each  $f \in \Sigma_e$

$$L_f \subseteq \Sigma'_e((\Sigma'_s \times \{0\})\Sigma'_e)^*$$

i.e., each word in  $L_f$  must start and end with an instantaneous event.

Handling **signals** is easy for *SEL*-substitutions.

# Closure under $SEL_\varepsilon$ -substitutions

Handling **signals** for  $SEL_\varepsilon$ -substitutions is **harder**.

Remember that substitutions are applied to SE-words in **normal form**.

A possible run gives :  $f a^{0.3} a^{0.6} \tau^0 a^{0.5} \tau^1 a^{0.6} \tau^0 a^{0.5} \tau^0 b^3 \approx f a^{1.4} \tau^1 a^{1.1} b^3$

We cannot simply replace each  $a$ -labelled state by a copy of  $\mathcal{A}_a$ .

# Closure under substitutions

## Proof technique inspired from the word case

- ▶ Let  $\sigma : A \rightarrow \mathcal{P}(B^*)$  be a rational substitution
- ▶ Let  $\Pi_A : (A \uplus B)^* \rightarrow A^*$  and  $\Pi_B : (A \uplus B)^* \rightarrow B^*$  be the projections
- ▶ Let  $M = \left( \bigcup_{a \in A} a\sigma(a) \right)^* \subseteq (A \uplus B)^*$  is rational.

- ▶ Then,  $\sigma(L) = \Pi_B(\Pi_A^{-1}(L) \cap M)$ .

- ▶ This proof technique also applies to **inverse** substitutions:  
 $\sigma^{-1}(L) = \Pi_A(\Pi_B^{-1}(L) \cap M)$ .

# Closure under substitutions

## Proof technique inspired from the word case

- ▶ Let  $\sigma : A \rightarrow \mathcal{P}(B^*)$  be a rational substitution

# Closure under $SEL_\varepsilon$ -substitutions

## Theorem

The class  $SEL_\varepsilon$  is closed under  $SEL_\varepsilon$ -substitutions and inverse  $SEL_\varepsilon$ -substitutions.

## Proof: Signal-event words

- ▶ Let  $\hat{\Sigma}_e = \Sigma_e \uplus \Sigma'_e$  and  $\hat{\Sigma}_s = \Sigma_s \times \Sigma'_s$ .
- ▶ Let  $\Pi_1 : SE(\hat{\Sigma}) \rightarrow SE(\Sigma)$  and  $\Pi_2 : SE(\hat{\Sigma}) \rightarrow SE(\Sigma')$  be the natural projections defined by

$$\Pi_1(f) = f \text{ and } \Pi_2(f) = \varepsilon \text{ if } f \in \Sigma_e,$$

$$\Pi_1(f) = \varepsilon \text{ and } \Pi_2(f) = f \text{ if } f \in \Sigma'_e,$$

$$\Pi_1((a, b)^d) = a^d \text{ and } \Pi_2((a, b)^d) = b^d \text{ if } (a, b)^d \in \Sigma_s \times \Sigma'_s \times \bar{\mathbb{T}}.$$

- ▶ We will show that for a suitable  $SEL_\varepsilon$ -language  $M$  we have

$$\sigma(L) = \Pi_2(\Pi_1^{-1}(L) \cap M)$$

$$\sigma^{-1}(L) = \Pi_1(\Pi_2^{-1}(L) \cap M)$$

- ▶ The class  $SEL_\varepsilon$  is closed under projection, inverse projection and intersection.

# Closure under $SEL_\varepsilon$ -substitutions

## Lemma

If  $L$  is in the class  $SEL_\varepsilon$ , then so is  $\Pi_1(L)$ .

## Proof

# Closure under $SEL_\varepsilon$ -substitutions

## Lemma

If  $L$  is in the class  $SEL_\varepsilon$ , then so is  $\Pi_1^{-1}(L)$ .

## Proof

# Closure under $SEL_\varepsilon$ -substitutions

Lemma

Words:  $M = \left(\bigcup_{a \in A} a\sigma(a)\right)^*$

If  $M \subseteq SE(\hat{\Sigma})$  satisfies

1.  $\pi_2(w) \in \sigma(\pi_1(w))$  for each  $w \in M$ ,
2.  $\forall u \in SE(\Sigma), \forall v \in \sigma(u), \exists w \in M$  such that  $u = \pi_1(w)$  and  $v = \pi_2(w)$ .

Then,

- ▶ for  $L \subseteq SE(\Sigma)$ , we have  $\sigma(L) = \pi_2(\pi_1^{-1}(L) \cap M)$ ,
- ▶ for  $L \subseteq SE(\Sigma')$ , we have  $\sigma^{-1}(L) = \pi_1(\pi_2^{-1}(L) \cap M)$ .

Proof

- ▶  $\sigma(L) \subseteq \pi_2(\pi_1^{-1}(L) \cap M)$ :

Let  $v \in \sigma(L)$  and let  $u \in L$  with  $v \in \sigma(u)$ .

From 2,  $\exists w \in M$  with  $\pi_1(w) = u$  and  $\pi_2(w) = v$ .

Then,  $w \in \pi_1^{-1}(L) \cap M$  and  $v \in \pi_2(\pi_1^{-1}(L) \cap M)$ .

- ▶  $\pi_2(\pi_1^{-1}(L) \cap M) \subseteq \sigma(L)$ :

Let  $v \in \pi_2(\pi_1^{-1}(L) \cap M)$  and let  $w \in \pi_1^{-1}(L) \cap M$  with  $\pi_2(w) = v$ .

We have  $u = \pi_1(w) \in L$  and from 1 we get  $v \in \sigma(u) \subseteq \sigma(L)$ .

# Closure under $SEL_\varepsilon$ -substitutions

Lemma

Words:  $M = \left(\bigcup_{a \in A} a\sigma(a)\right)^*$

If  $M \subseteq SE(\hat{\Sigma})$  satisfies

1.  $\pi_2(w) \in \sigma(\pi_1(w))$  for each  $w \in M$ ,
2.  $\forall u \in SE(\Sigma), \forall v \in \sigma(u), \exists w \in M$  such that  $u = \pi_1(w)$  and  $v = \pi_2(w)$ .

Then,

- ▶ for  $L \subseteq SE(\Sigma)$ , we have  $\sigma(L) = \pi_2(\pi_1^{-1}(L) \cap M)$ ,
- ▶ for  $L \subseteq SE(\Sigma')$ , we have  $\sigma^{-1}(L) = \pi_1(\pi_2^{-1}(L) \cap M)$ .

Proof

- ▶  $\sigma(L) \subseteq \pi_2(\pi_1^{-1}(L) \cap M)$ :

Let  $v \in \sigma(L)$  and let  $u \in L$  with  $v \in \sigma(u)$ .

From 2,  $\exists w \in M$  with  $\pi_1(w) = u$  and  $\pi_2(w) = v$ .

Then,  $w \in \pi_1^{-1}(L) \cap M$  and  $v \in \pi_2(\pi_1^{-1}(L) \cap M)$ .

- ▶  $\pi_2(\pi_1^{-1}(L) \cap M) \subseteq \sigma(L)$ :

Let  $v \in \pi_2(\pi_1^{-1}(L) \cap M)$  and let  $w \in \pi_1^{-1}(L) \cap M$  with  $\pi_2(w) = v$ .

We have  $u = \pi_1(w) \in L$  and from 1 we get  $v \in \sigma(u) \subseteq \sigma(L)$ .

# Closure under $SEL_\varepsilon$ -substitutions

## Definition of $M$

Words:  $M = \left(\bigcup_{a \in A} a\sigma(a)\right)^*$

For  $f \in \Sigma_e$  and  $a \in \Sigma_s \setminus \{\tau\}$ , we define

$$M_f = \{w \in SE(\hat{\Sigma}) \mid w = (\tau, b_0)^0 f_1(\tau, b_1)^0 f_2 \cdots (\tau, b_n)^0 \\ \text{with } b_0^0 f_1 b_1^0 f_2 \cdots b_n^0 \in \sigma(f)\} \cdot f$$

$$M_a = \{w \in SE(\hat{\Sigma}) \mid w = (a, b_0)^{d_0} f_1(a, b_1)^{d_1} f_2 \cdots \\ \text{with } b_0^{d_0} f_1 b_1^{d_1} f_2 \cdots \in \sigma(a^{d_0+d_1+\cdots})\}$$

$$M_\tau = \{(\tau, \tau)^d \mid d \in \overline{\mathbb{T}} \setminus \{0\}\}$$

Note that each set  $M_f$  and  $M_a$  satisfies properties 1 and 2.

$$M = \{w_1 w_2 \cdots \mid \exists a_1, a_2, \dots \in \Sigma_e \cup \Sigma_s \text{ with } w_i \in M_{a_i} \text{ and } a_i \in \Sigma_s \Rightarrow a_{i+1} \neq a_i\}.$$

## Lemma

The language  $M$  is in the class  $SEL_\varepsilon$  and satisfies

1.  $\pi_2(w) \in \sigma(\pi_1(w))$  for each  $w \in M$ ,
2.  $\forall u \in SE(\Sigma), \forall v \in \sigma(u), \exists w \in M$  such that  $u = \pi_1(w)$  and  $v = \pi_2(w)$ .

# Closure under inverse *SEL*-substitutions

The class *SEL* is not closed under arbitrary inverse *SEL*-substitutions

- ▶ Let  $\Sigma_s = \Sigma'_s = \{a, b\}$  and  $\Sigma_e = \Sigma'_e = \{f\}$ .
- ▶ Let  $\sigma$  be the *SEL*-substitution defined by  $L_a = \{a^1 f\}$ ,  $L_b = \{b^0\}$  and  $L_f = \{f\}$ .
- ▶  $L = \{a^1 f b^0\}$  is a *SEL*.
- ▶  $\sigma^{-1}(L) = \{a^1 b^0\}$  is not a *SEL*.

## Theorem

The class *SEL* is closed under inverse *SEL*-substitution acting only on events:  
 $L_a = \{a\} \times \overline{\mathbb{T}}$  for all  $a \in \Sigma_s$ .

# Closure under inverse *SEL*-substitutions

The class *SEL* is not closed under arbitrary inverse *SEL*-substitutions

# Outline

Introduction

Signal-Event (Timed) Words and Automata

Signal-Event (Timed) Substitutions

Recognizable substitutions

5 Conclusion

# Conclusion

- ▶ Signal-event words are the natural objects for studying refinements, abstractions and other problems.
- ▶ Extending classical results to SE-automata is not always easy due to  $\varepsilon$ -transitions, signal stuttering, unobservability of  $\tau^0$ , Zeno runs, ...
- ▶ We have proved closure properties (refinement, abstraction) for the general case of SE-automata.
