

Implicational Relevance Logic is 2-EXPTIME-Complete

S. Schmitz

LSV, ENS Cachan & INRIA, France

GT Sémantique, PPS, October 22nd, 2014

OUTLINE

- ▶ **Implicational relevance logic \mathbf{R}_{\rightarrow}**
the “oldest” relevance logic (Moh, 1950; Church, 1951)

THEOREM

Provability in \mathbf{R}_{\rightarrow} is 2-EXPTIME-complete.

- ▶ **Branching VASS**
as a means to prove algorithmic results

FACT (DEMRI et al., 2013)

Coverability in BVASS is 2-EXPTIME-complete.

- ▶ **Inter-reductions**
between counter systems and substructural logics

BRANCHING VECTOR ADDITION SYSTEMS

$\mathcal{B} = \langle Q, d, T_u, T_s \rangle$ Q finite set of states, d dimension in \mathbb{N}

configurations $q, \mathbf{v} \in Q \times \mathbb{N}^d$

unary rules $q \xrightarrow{\mathbf{u}} q' \in T_u \subseteq_{\text{fin}} Q \times \mathbb{Z}^d \times Q$

$$\frac{q, \mathbf{v}}{q', \mathbf{v} + \mathbf{u}} \text{ (unary)}$$

split rules $q \rightarrow q_1 + q_2 \in T_s \subseteq Q^3$

$$\frac{q, \mathbf{v}_1 + \mathbf{v}_2}{q_1, \mathbf{v}_1 \quad q_2, \mathbf{v}_2} \text{ (split)}$$

BRANCHING VECTOR ADDITION SYSTEMS

$\mathcal{B} = \langle Q, d, T_u, T_s \rangle$ Q finite set of states, d dimension in \mathbb{N}

configurations $q, \mathbf{v} \in Q \times \mathbb{N}^d$

unary rules $q \xrightarrow{\mathbf{u}} q' \in T_u \subseteq_{\text{fin}} Q \times \mathbb{Z}^d \times Q$

$$\frac{q, \mathbf{v}}{q', \mathbf{v} + \mathbf{u} \geq \mathbf{0}} \text{ (unary)}$$

split rules $q \rightarrow q_1 + q_2 \in T_s \subseteq Q^3$

$$\frac{q, \mathbf{v}_1 + \mathbf{v}_2}{q_1, \mathbf{v}_1 \quad q_2, \mathbf{v}_2} \text{ (split)}$$

BRANCHING VECTOR ADDITION SYSTEMS

$\mathcal{B} = \langle Q, d, T_u, T_s \rangle$ Q finite set of states, d dimension in \mathbb{N}

configurations $q, \mathbf{v} \in Q \times \mathbb{N}^d$

unary rules $q \xrightarrow{\mathbf{u}} q' \in T_u \subseteq_{\text{fin}} Q \times \mathbb{Z}^d \times Q$

$$\frac{q, \mathbf{v}}{q', \mathbf{v} + \mathbf{u}} \text{ (unary)}$$

split rules $q \rightarrow q_1 + q_2 \in T_s \subseteq Q^3$

$$\frac{q, \mathbf{v}_1 + \mathbf{v}_2}{q_1, \mathbf{v}_1 \quad q_2, \mathbf{v}_2} \text{ (split)}$$

BRANCHING VECTOR ADDITION SYSTEMS

$\mathcal{B} = \langle Q, d, T_u, T_s \rangle$ Q finite set of states, d dimension in \mathbb{N}

configurations $q, \mathbf{v} \in Q \times \mathbb{N}^d$

unary rules $q \xrightarrow{\mathbf{u}} q' \in T_u \subseteq_{\text{fin}} Q \times \mathbb{Z}^d \times Q$

$$\frac{q, \mathbf{v}}{q', \mathbf{v} + \mathbf{u}} \text{ (unary)}$$

split rules $q \rightarrow q_1 + q_2 \in T_s \subseteq Q^3$

$$\frac{q, \mathbf{v}_1 + \mathbf{v}_2}{q_1, \mathbf{v}_1 \geq \mathbf{0} \quad q_2, \mathbf{v}_2 \geq \mathbf{0}} \text{ (split)}$$

EXAMPLE

EXAMPLE

 $q_r, 0, 0$

EXAMPLE

$$\frac{q_r, 0, 0}{q, 0, 1}$$

EXAMPLE

$$\frac{q_r, 0, 0}{q, 0, 1} \\ \hline q_1, 0, 0 \qquad q_2, 0, 1$$

EXAMPLE

$$\frac{\frac{q_r, 0, 0}{q, 0, 1}}{q_1, 0, 0} \quad \frac{q_2, 0, 1}{q_e, 0, 0}$$

EXAMPLE

$$\frac{\frac{q_r, 0, 0}{q, 0, 1}}{\frac{q_1, 0, 0}{q_r, 1, 0}} \quad \frac{q_2, 0, 1}{q_l, 0, 0}$$

EXAMPLE

$$\frac{\frac{q_1, 0, 0}{q_r, 1, 0}}{q, 1, 1} \quad \frac{\frac{q_r, 0, 0}{q, 0, 1}}{q_2, 0, 1}}{q_l, 0, 0}$$

EXAMPLE

$$\begin{array}{r}
 \frac{q_r, 0, 0}{q, 0, 1} \\
 \hline
 \frac{q_1, 0, 0}{q_r, 1, 0} \quad \frac{q_2, 0, 1}{q_\ell, 0, 0} \\
 \hline
 q, 1, 1 \\
 \hline
 q_1, 1, 0 \quad q_2, 0, 1
 \end{array}$$

EXAMPLE

$$\begin{array}{r}
 \frac{q_r, 0, 0}{q, 0, 1} \\
 \hline
 \frac{q_1, 0, 0}{q_r, 1, 0} \quad \frac{q_2, 0, 1}{q_e, 0, 0} \\
 \frac{q, 1, 1}{q_1, 1, 0} \quad \frac{q_2, 0, 1}{q_e, 0, 0}
 \end{array}$$

EXAMPLE

$$\begin{array}{r}
 \frac{q_r, 0, 0}{q, 0, 1} \\
 \hline
 \frac{q_1, 0, 0}{q_r, 1, 0} \quad \frac{q_2, 0, 1}{q_e, 0, 0} \\
 \frac{q, 1, 1}{q, 1, 1} \\
 \hline
 \frac{q_1, 1, 0}{q_e, 0, 0} \quad \frac{q_2, 0, 1}{q_e, 0, 0}
 \end{array}$$

SOME APPLICATION DOMAINS

computational linguistics (survey in S., 2010)

- ▶ dominance links (Rambow, 1994)
- ▶ abstract categorial grammars (de Groote, 2001)
- ▶ minimal grammars (Salvati, 2011)

linear logic inter-reductions with MELL (de Groote et al., 2004; Lazić and S., 2014)

protocol verification Horn deduction modulo AC (Verma and Goubault-Larrecq, 2005)

data logics for XML $\text{FO}^2(<, +1, \sim)$ (Bojańczyk et al., 2009; Dimino et al., 2013)

parallel programming (Bouajjani and Emmi, 2013)

DECISION PROBLEMS

Given $\mathcal{B} = \langle Q, d, T_u, T_s \rangle$ and $q_r, q_\ell \in Q$.

REACHABILITY

Does there exist a deduction tree rooted by $q_r, \mathbf{0}$ and with $q_\ell, \mathbf{0}$ as leaves?

- ▶ TOWER-hard (Lazić and S., 2014)
- ▶ decidability open, recursively equivalent to MELL provability (de Groote et al., 2004)

(ROOT) COVERABILITY

Does there exist a deduction tree rooted by q_r, \mathbf{v} for some $\mathbf{v} \in \mathbb{N}^d$ and with $q_\ell, \mathbf{0}$ as leaves?

- ▶ 2-EXPTIME-complete (Demri et al., 2013)
- ▶ parametric complexity: doubly exponential in dimension d , but **polynomial** in $|Q|$ and $\|T_u\|_\infty$

DECISION PROBLEMS

Given $\mathcal{B} = \langle Q, d, T_u, T_s \rangle$ and $q_r, q_\ell \in Q$.

REACHABILITY

Does there exist a deduction tree rooted by $q_r, \mathbf{0}$ and with $q_\ell, \mathbf{0}$ as leaves?

- ▶ TOWER-hard (Lazić and S., 2014)
- ▶ decidability open, recursively equivalent to MELL provability (de Groote et al., 2004)

(ROOT) COVERABILITY

Does there exist a deduction tree rooted by q_r, \mathbf{v} for some $\mathbf{v} \in \mathbb{N}^d$ and with $q_\ell, \mathbf{0}$ as leaves?

- ▶ 2-EXPTIME-complete (Demri et al., 2013)
- ▶ parametric complexity: doubly exponential in dimension d , but **polynomial** in $|Q|$ and $\|T_u\|_\infty$

DECISION PROBLEMS

Given $\mathcal{B} = \langle Q, d, T_u, T_s \rangle$ and $q_r, q_\ell \in Q$.

REACHABILITY

Does there exist a deduction tree rooted by $q_r, \mathbf{0}$ and with $q_\ell, \mathbf{0}$ as leaves?

- ▶ TOWER-hard (Lazić and S., 2014)
- ▶ decidability open, recursively equivalent to MELL provability (de Groote et al., 2004)

- ▶ parametric complexity: doubly exponential in dimension d , but **polynomial** in $|Q|$ and $\|T_u\|_\infty$

IMPLICATIONAL RELEVANCE LOGIC \mathbf{R}_{\rightarrow}

EXAMPLE: $A \rightarrow (B \rightarrow A)$

“if it’s raining (A), then if your favorite color is green (B) then it’s raining (A)”

A theorem in classical logic, **not** in relevance logic.

GENTZEN-STYLE SEQUENT CALCULUS

A, B, C formulæ; Γ, Δ multisets of formulæ; no weakening

$$\frac{}{A \vdash A} \text{ (Id)}$$

$$\frac{\Gamma, A, A \vdash B}{\Gamma, A \vdash B} \text{ (C)}$$

$$\frac{\Gamma \vdash A \quad \Delta, B \vdash C}{\Gamma, \Delta, A \rightarrow B \vdash C} (\rightarrow_L)$$

$$\frac{\Gamma, A \vdash B}{\Gamma \vdash A \rightarrow B} (\rightarrow_R)$$

IMPLICATIONAL RELEVANCE LOGIC \mathbf{R}_{\rightarrow}

EXAMPLE: $A \rightarrow (B \rightarrow A)$

“if it’s raining (A), then if your favorite color is green (B) then it’s raining (A)”

A theorem in classical logic, not in relevance logic.

GENTZEN-STYLE SEQUENT CALCULUS

A, B, C formulæ; Γ, Δ multisets of formulæ; **no weakening**

$$\frac{}{A \vdash A} \text{ (Id)}$$

$$\frac{\Gamma, A, A \vdash B}{\Gamma, A \vdash B} \text{ (C)}$$

$$\frac{\Gamma \vdash A \quad \Delta, B \vdash C}{\Gamma, \Delta, A \rightarrow B \vdash C} (\rightarrow_L)$$

$$\frac{\Gamma, A \vdash B}{\Gamma \vdash A \rightarrow B} (\rightarrow_R)$$

SOME HISTORY

Independently defined Hilbert-style axiomatic systems by Moh (1950) and Church (1951)

Weak Deduction Theorem (Church, 1951)

If $A_1, \dots, A_{n-1}, A_n \vdash B$ and A_n is **relevant**, then $A_1, \dots, A_{n-1} \vdash A_n \rightarrow B$.

Proved decidable by Kripke (1959) (wqo argument)

THEOREM (KRIPKE, 1959)

*If $\vdash A$ is a theorem of \mathbf{R}_{\rightarrow} , then there exists an **irredundant** proof for it.*

INHABITATION OF SIMPLE TYPES

$\tau ::= \alpha \mid \tau \rightarrow \tau$ α ranges over atomic types

λ I-CALCULUS (CHURCH, 1930's)

Given τ , does there exist a closed λ I term with type τ ?

$$\frac{}{x:\tau \vdash x:\tau} \text{ (var)}$$

$$\frac{\Gamma, x:\tau \vdash t:\tau' \quad x \text{ occurs free in } t}{\Gamma \vdash (\lambda x.t) : \tau \rightarrow \tau'} \text{ (abs)}$$

$$\frac{\Gamma \vdash t:\tau \rightarrow \tau' \quad \Delta \vdash t':\tau}{\Gamma, \Delta \vdash (tt'):\tau'} \text{ (app)}$$

INHABITATION OF SIMPLE TYPES

$\tau ::= a \mid \tau \rightarrow \tau$ a ranges over atomic types

COMBINATORY LOGIC (SEE CURRY AND CRAIG, 1953)

Given τ , does there exist a closed term built from combinators B, C, I, W with type τ ?

$$Bfgx = f(gx) : (B \rightarrow C) \rightarrow ((A \rightarrow B) \rightarrow (A \rightarrow C))$$

$$Cfxy = fyx : (A \rightarrow (B \rightarrow C)) \rightarrow (B \rightarrow (A \rightarrow C))$$

$$Ix = x : A \rightarrow A$$

$$Wxy = xyy : (A \rightarrow (A \rightarrow B)) \rightarrow (A \rightarrow B)$$

COMPLEXITY OF THE DECISION PROBLEM

THEOREM (URQUHART, 1990)

Provability in \mathbf{R}_{\rightarrow} is EXPSPACE-hard and ACKERMANN-easy.

THEOREM (URQUHART, 1999)

Provability in $\mathbf{R}_{\rightarrow, \wedge}$ is ACKERMANN-complete.

COMPLEXITY OF THE DECISION PROBLEM

THEOREM (URQUHART, 1990)

Provability in \mathbf{R}_{\rightarrow} is EXPSPACE-hard and ACKERMANN-easy.

THEOREM (URQUHART, 1999)

Provability in $\mathbf{R}_{\rightarrow, \wedge}$ is ACKERMANN-complete.

FROM BVASS TO \mathbf{R}_{\rightarrow} (3/3)

LEMMA

A sequent $q_{\ell}, \Gamma_{\mathbf{v}}, \Delta_{\top} \vdash q$ is provable in \mathbf{R}_{\rightarrow} iff there exists an *expansive* deduction tree of \mathcal{B} with

1. leaves labeled by $q_{\ell}, \mathbf{0}$,
2. root labeled by q, \mathbf{v} ,
3. each rule in \top employed *at least once*.

COMPREHENSIVE REACHABILITY

Every rule in $T_{\mathbf{u}} \cup T_{\mathbf{s}}$ is used at least once in the witness deduction tree.

Proposition

BVASS Coverability $<_{\text{LOGSPACE}}$

Comprehensive Expansive BVASS Reachability

FOCUSING PROOF SYSTEM $\mathbf{FR}_{\rightarrow}$

(USED TO PROVE THE PREVIOUS LEMMA)

$$\frac{}{[a] \Vdash a} \text{ (atomic)} \quad \frac{\Gamma, [A] \Vdash a}{\Gamma, A \Vdash a} \text{ (focus)} \quad \frac{\Gamma, A, A \Vdash a}{\Gamma, A \Vdash a} \text{ (C}^f\text{)}$$

$$\frac{\Gamma \Vdash A \quad \Delta, [B] \Vdash a}{\Gamma, \Delta, [A \rightarrow B] \Vdash a} \text{ (}\neg^f_L\text{)} \quad \frac{\Gamma, A \Vdash B}{\Gamma \Vdash A \rightarrow B} \text{ (}\neg^f_R\text{)}$$

THEOREM

$\Gamma \vdash A$ is provable in $\mathbf{LR}_{\rightarrow}$ iff $\Gamma \Vdash A$ is provable in $\mathbf{FR}_{\rightarrow}$.

EXTENSIONS

Larger fragments of **R** and contractive intuitionistic linear logic:

THEOREM

*Provability in $\mathbf{R}_{\rightarrow}^t$, **IMLLC**, and **IMELZC** is 2-ExpTime-complete.*

Appendix A The focusing proof sequent calculus for \mathbf{R}_{\rightarrow}

Appendix B A parameterized analysis of
2-EXPTIME-easiness for BVASS (instead of
BVAS as in Demri et al., 2013)

PERSPECTIVES

- ▶ employing a BVASS coverability tool for \mathbf{R}_{\rightarrow} (Majumdar and Wang, 2013)?
- ▶ what about the complexity of \mathbf{T}_{\rightarrow} (Bimbó and Dunn, 2013; Padovani, 2013)?
